

# Engineering @ Microsoft

Microsoft empowers its developers to deliver at massive scale.

- We provide tools and services to cover the full spectrum of the engineering lifecycle, from the developer desktop to product deployment.
- We focus on engineering solutions that mitigate the unique scale challenges that Microsoft teams face, both in terms of breadth (consistently managing many software products within an organization) and depth (managing huge source code repositories).
- We achieve this by building on retail developer tools to deliver solutions to common engineering patterns that provide a productive and satisfying developer experience to engineers with the performance, security, accessibility, and scale that Microsoft requires.

The One Engineering System mission is to provide Microsoft engineers with world-class tools and systems that help them ship products their customers love.

# Engineering @ Microsoft

Microsoft's engineering ecosystem is massive.

Our solutions cover:

- Accessible software
- Build acceleration
- Flaky test management
- Policy automation & enforcement
- Secure supply chain management
- CI/CD service @ scale
